

Suggested Guidelines for Fabricated Subdrain Systems

D. Yoakum¹, B. Korin², and D.D. Overton³, et al.

ASCE Geotechnical Group, Los Angeles Section Special Paper, December 1991.

ABSTRACT

These are suggested guidelines for the materials, design, and installation of fabricated subdrain systems. Subdrain designers are responsible for design of an appropriate system for each project. Subdrain system installers are responsible for installing the system so that it functions as intended. In no way shall these guidelines be construed to relieve the designers and installers of their responsibilities.

The governmental agencies, consultants, and manufactures who contributory to the preparation of these guidelines do not warrant the adequacy of subdrain systems designed and installed using these guidelines.
